n8n Social Media Automation Workflow Report

1. Project Overview

This report describes an automation workflow built using n8n that processes form submissions, retrieves data from Google Sheets, and automatically generates personalized outputs including emails and social media posts for multiple platforms.

2. Objective

The goal of this project is to automate content distribution and communication by reducing manual work. The system takes information submitted through a form and automatically creates customized outputs such as confirmation emails and social media posts.

3. Technologies Used

- n8n – Workflow automation platform
- Google Sheets – Data storage and retrieval
- Email Service – Sending automated confirmation emails
- Social Media Platforms – Instagram, Facebook, LinkedIn

4. Workflow Description

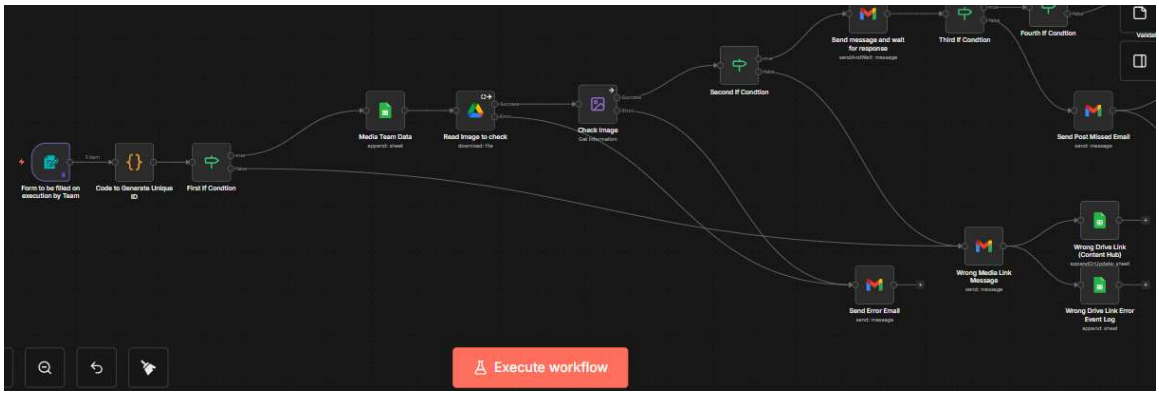
1. A user submits a form containing required information.
2. The data is stored in Google Sheets.
3. n8n reads the information from the sheet.
4. The workflow dynamically creates variable Unique ID for each post.
5. Personalized outputs are generated including email confirmations and social media posts.
6. The system sends the email and prepares content for social media publishing and posts to the required platforms and Updates Logs.

5. Workflow Architecture

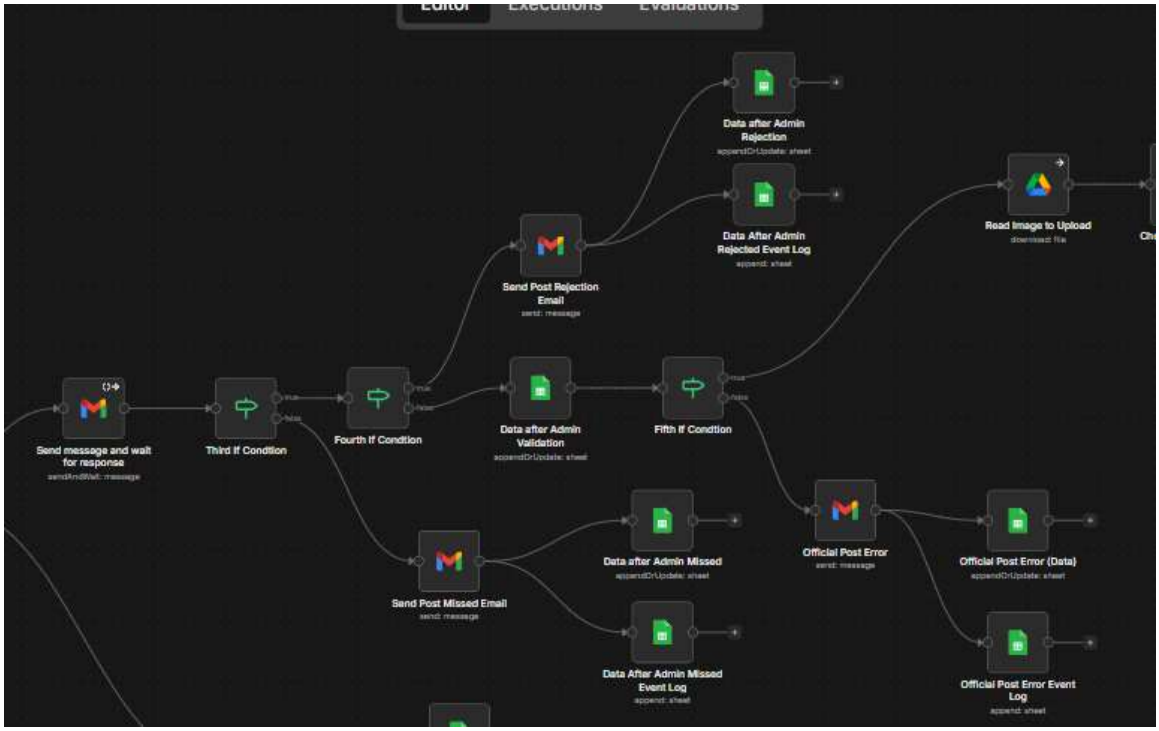
Form Submission → Google Sheets → n8n Workflow → Data Processing → Email Generation → Social Media Content Creation→Posting to Platforms→ Update logs

7. Workflow Screenshots

Form Submission, Unique ID Generation And Updating Google Sheets Node:



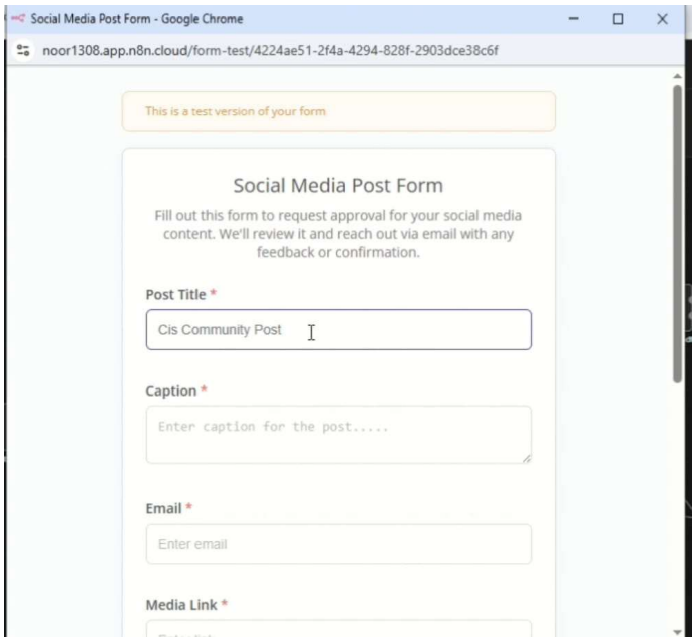
Asking Admin Approval and Data Validation Nodes:



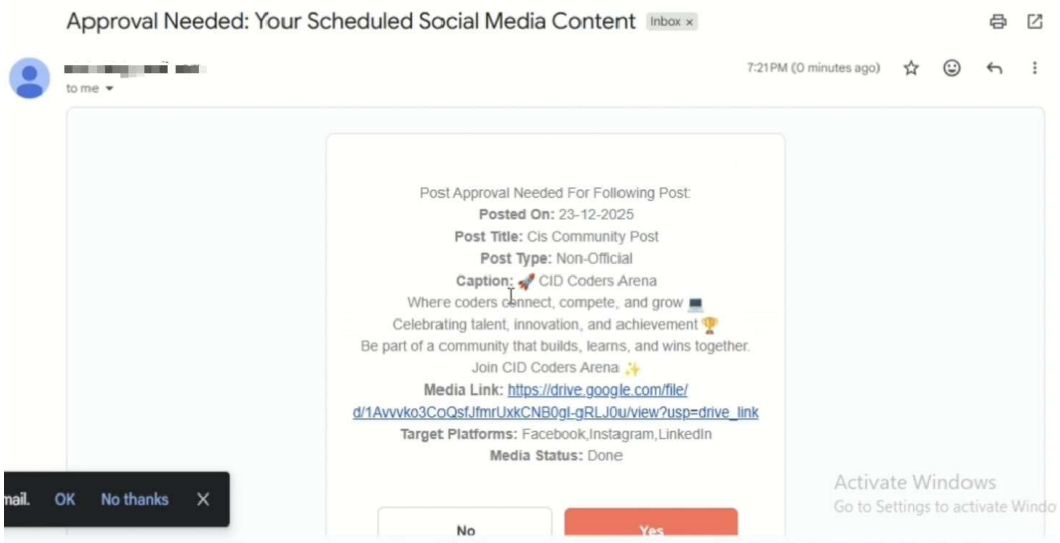
Downloading Image And Posting to Platforms Nodes:

6. Output Screenshots

Form Submission Output

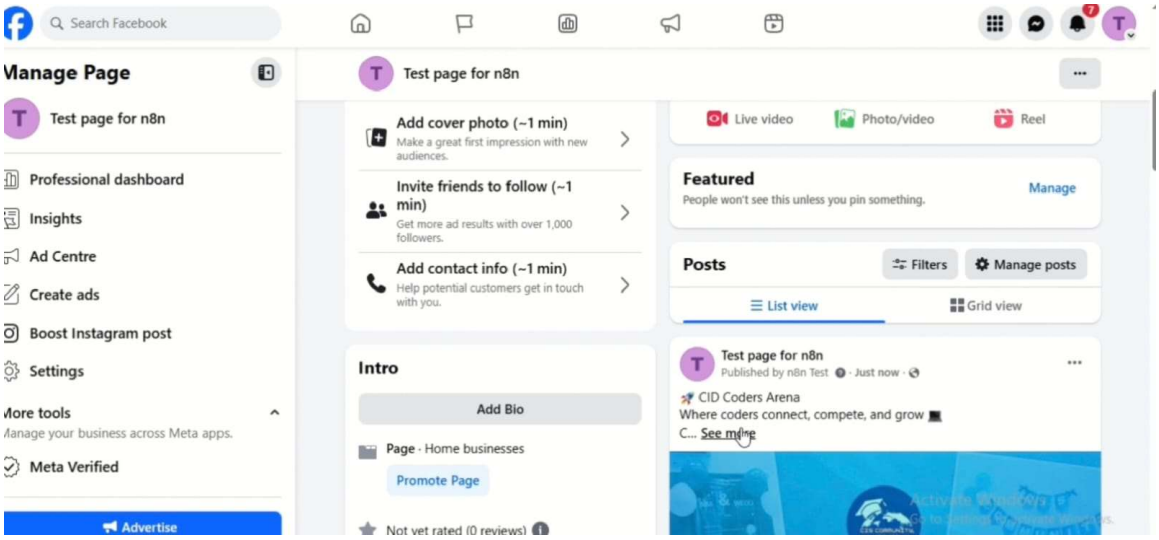


Email Output



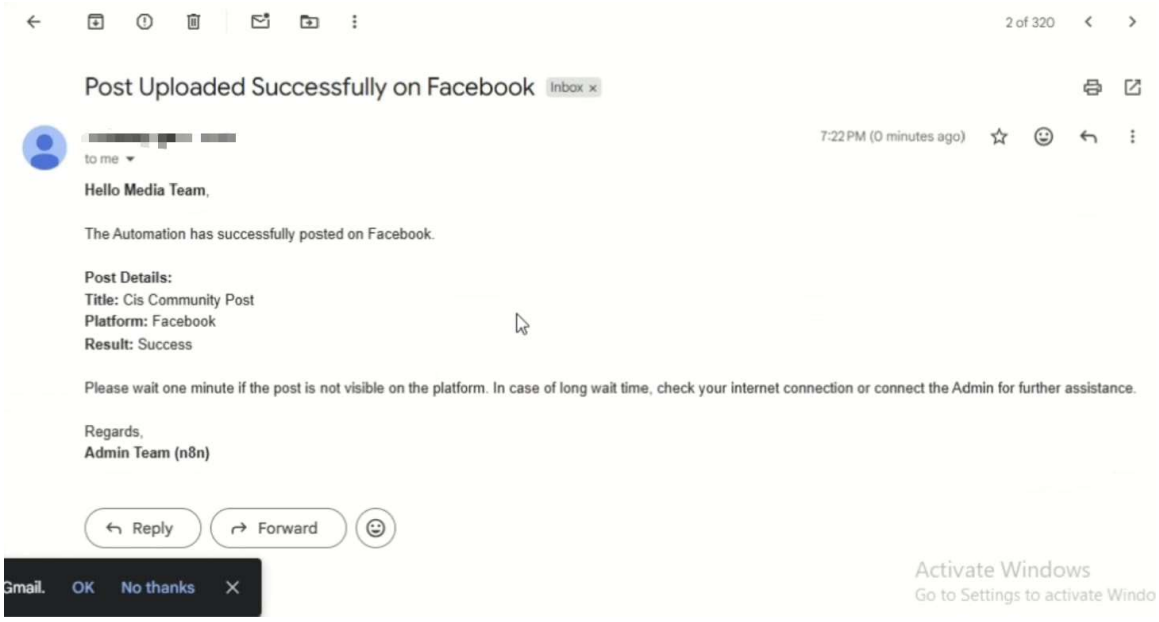
Instagram Post Output

Facebook Post Output



LinkedIn Post Output

Successful Post Email



7. Conclusion

This automation system demonstrates how workflow automation tools like n8n can streamline communication processes by integrating forms, spreadsheets, and messaging platforms. The project reduces manual effort while ensuring consistent and timely outputs.
